

ABSTRACT OF THE DISCLOSURE

A shrimp container for precooked shrimp has an integral serving tray that slidably receives a transparent cover, the tray and cover cooperatively defining a cavity enclosing a plurality of shrimp. The serving tray includes a cup holder that is surrounded by an annular shelf for supporting the shrimp. A plurality of transverse grooves intersects the shelf radially to drain liquids away from the shrimp. Annular drain grooves disposed at the inner and outer periphery of the shelf receive the drained liquids from the radial grooves. A condiment cup is removably insertable into the cup holder. The cup holder includes a cylindrical wall that extends upwardly higher than the annular shelf, thereby precluding the shrimp from sliding over the cup holder.
